PROJECT REVIEW : MILESTONE PROJECT – 2

Date: 17-04-2026

**Design and develop a React JS based web application for Ticket Booking of an
Internal Department Event**

Presented By:

Kalaiyarasan k – VTU26102 – 23UECS1085

Courses Handling Faculty:

Dr. HAFIZUR RAHMAN

ASSISTANT PROFESSOR

INTRODUCTION

Background of the Problem

1

Many colleges and organizations still rely on manual or semi-digital methods (like spreadsheets, paper registrations, or Google Forms) for event ticket booking. This leads to issues such as duplicate entries, lack of real-time updates, difficulty in managing seat availability, and poor user experience.

2

3

Importance of the Project

4

The Ticket Booking System provides a centralized and efficient platform for managing internal department events. It simplifies the booking process by offering real-time seat availability, secure registration, and easy data management. This system reduces manual effort, avoids booking conflicts, and improves overall event organization.

5

6

7

Real-World Relevance

In today's digital era, automated ticket booking systems are widely used for events, movies, transportation, and seminars. Implementing such a system helps students and organizers understand real-world application development and prepares them for building scalable solutions used in industries.

8

9

System Overview

The Ticket Booking System is a web-based application built using **React JS** for a dynamic and responsive frontend.

PROBLEM STATEMENT

Problem Statement

1

2

3

4

5

6

7

8

9

- Managing ticket bookings for internal department events such as technical fests, workshops, and seminars is often inefficient due to manual processes or poorly organized digital tools.
- These methods lack real-time updates, can lead to overbooking or data inconsistencies, and make it difficult for organizers to track participants and manage event capacity effectively.
- There is a need for a centralized, user-friendly web application that allows users to book tickets seamlessly while enabling administrators to manage events, monitor registrations, and ensure accurate, real-time data handling.
- The system should provide a smooth booking experience, reduce manual errors, and improve overall event management efficiency.
- Additionally, the absence of a structured system makes it difficult to generate reports and analyze event participation trends.
- A digital solution is required to ensure transparency, improve accessibility, and enhance the overall user experience for both organizers and participants.

OBJECTIVE(S)

The picture can't be displayed.

1

2

3

Objectives

- To develop a user-friendly web application that enables easy and secure ticket booking for internal department events.
- To provide an efficient system for organizers to manage events, track registrations, and monitor seat availability in real-time.

4

5

6

7

PROPOSED SYSTEM

The picture can't be displayed.

1

Proposed Solution

2

3

4

- Provides a simple and intuitive UI for users to browse events and book tickets easily. Improves user experience with clean navigation and design.
- Allows users to explore upcoming events / seminar in the portal
- Enables user to register for the events by giving their details and selecting their preferred seats.
- After this moves to the confirmation state where user enter their card details for payment .
- Automatically confirms ticket bookings after successful transactions. Reduces manual work and improves system efficiency.
- Generates tickets along with a pdf (optional) allows reducing difficulties at time of participation.

9

PROPOSED SYSTEM ARCHITECTURE

1

2

3

4

5

6

7

8

9

Input

The system takes user inputs such as name, email ID, department, and number of tickets required. It also accepts event-related data like event name, date, venue, and ticket price for processing bookings.

Processing

The system validates user inputs and checks ticket availability before processing the booking request. It then updates the database, reduces the available ticket count, and generates a booking confirmation.

Payment Gateway

Allows the user to do payment and after payment is done it redirects to the confirmation page

Output

The system displays booking confirmation along with user details, event name, number of tickets, and total amount with a pdf .

9

TECHNOLOGIES USED

The picture can't be displayed.

1

Technologies & Requirements:

2

Frontend:

React JS ,HTML,CSS,JavaScript,BootStrap.

3

4

Backend:

Node.js and Express.js are used to handle server-side logic and API requests.

5

6

DATABASE: mysql database

7

Tools:

Visual Studio Code, GitHub, Notepad++.

8

Hardware/Software Requirements:

9

Processor: Intel i3 or above

RAM: 4GB minimum

Operating System: Windows / Linux / macOS

Web Browser: Chrome / Edge / Firefox / Safari

IMPLEMENTATION SCREENSHOTS

- The screenshot shows the user interface of the Ticket Booking System with event details and booking form displayed clearly.

IMPLEMENTATION SCREENSHOTS

The picture can't be displayed.

The screenshot displays a web form titled "Book Your Tickets". The form contains the following fields and elements:

- Full Name:** A text input field containing the value "kalaiyaran".
- Email ID:** A text input field containing the value "vtu26102@veltech.edu.in".
- Department:** A dropdown menu with "cse" selected.
- Number of Tickets:** A text input field with a "#" prefix and the value "1".
- Estimated Total:** A summary bar showing "₹200".
- Buttons:** Two buttons at the bottom: "Book Now" (highlighted in blue) and "Reset".

- This screenshot displays the working booking form where user details like name, email, department, and ticket count are entered.

IMPLEMENTATION SCREENSHOTS

The picture can't be displayed.

ADVANTAGES & LIMITATIONS

1

ADVANTAGES

2

1.Simple and user-friendly interface helps students and faculty book tickets quickly without confusion.

3

2.Automatically updates available ticket count, reducing chances of overbooking.

4

3.Eliminates paperwork and manual tracking, saving time for organizers.

5

6

LIMITATIONS

7

1.Designed mainly for internal department events, not suitable for large-scale systems.

8

2.Basic version may not support payment gateways for real transactions.

9

Thank you
